Duration	3 mins 5 secs
Grade	**13.00** out of 15.00 (**86.67**%)

Question **1**

Incorrect

Mark 0.00 out of 1.00

Which of the following best describes the process of a linear search?

a. Checking each element sequentially
b. Dividing the list in half repeatedly
c. Sorting the list before searching ✗
d. Skipping every second element

Question **2**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The first element is returned
b. The last element is returned
c. The search is considered unsuccessful ✓
d. An error is raised

Question **3**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

a. In the left sublist
b. At the beginning of the list
c. In the right sublist ✓
d. In the middle of the list

Question **4**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

- a. It requires the list to be sorted ✓
- b. It can only be applied to large lists
- c. It does not work with negative numbers
- d. It is slower than linear search for small lists

Question **5**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

- a. Inserting elements into a list
- b. Sorting elements in a list
- c. Deleting elements from a list
- d. Determining whether an element is present in a list ✓

Question **6**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

- a. Linear search ✓
- b. Dynamic search
- c. Hashing
- d. Binary search

Question **7**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

- a. Linear search ✓
- b. Bubble search
- c. Merge search
- d. Quick search

Question **8**

Incorrect

Mark 0.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

a. Linear search
b. Hash search ✗
c. Binary search
d. Interpolation search

Question **9**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

a. Searching ✓
b. Mining
c. Discovering
d. Finding

Question **10**

Correct

Mark 1.00 out of 1.00

What is the best-case time complexity of linear search?

a. O(log n)
b. O👎
c. O(n log n)
d. O(1) ✓

Question **11**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search continues until the end of the list
b. The search stops immediately ✓
c. The search starts over from the beginning
d. The search backtracks to find duplicate elements

Question **12**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

a. Linear search is more efficient than binary search on large lists.
b. Linear search can be applied to both sorted and unsorted lists. ✓
c. Linear search requires the list to be sorted.
d. Linear search divides the list into halves.

Question **13**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

a. When the list is large and sorted
b. When the list is small and sorted
c. When the list is large and unsorted
d. When the list is small and unsorted ✓

Question **14**

Correct

Mark 1.00 out of 1.00

In a linear search, how many comparisons are made in the worst-case scenario to find an element in a list of size n?

a. 1
b. n/2
c. n ✓
d. log n

Question **15**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

a. n/2
b. n-1
c. log n
d. n ✓
